Business Continuity

STL Business Communications Solutions

The clever app that ensures inbound calls can be managed, no matter the circumstances.
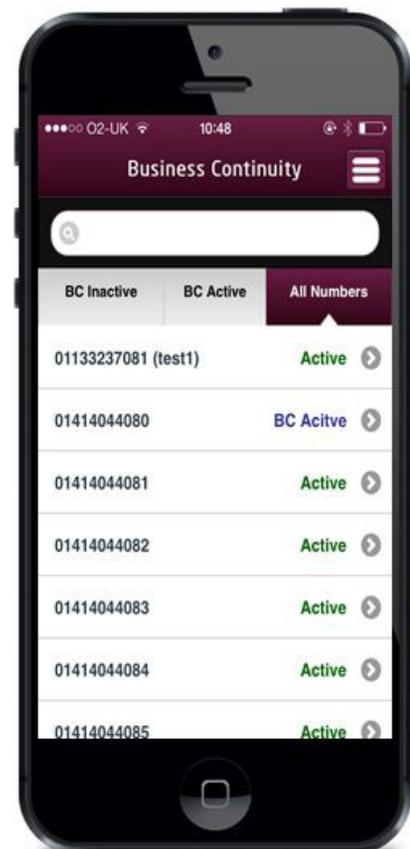

What is Business Continuity?

Recent statistics suggest that over half of UK SMEs don't have a disaster recovery plan in place to protect their business against data loss, network outage and other IT disasters.

Of the SMEs that do have systems in place, 83% admit their preparations are 'less than excellent'.

In response to this, a clever new service called Business Continuity has been developed.

The service can be accessed via a secure website or through an easy to use app available for use on Android, iOS (Apple), Windows Mobile or BlackBerry devices.

Who should buy Business Continuity?

Any SME business looking to complete its business continuity puzzle will benefit from the Business Continuity app.

Business Continuity delivers a real solution to a real-life problem experienced by most businesses and by deploying this simple-to-use app, you'll get the peace of mind knowing your inbound calls will always reach you - all for a predictable fixed monthly fee.

Gamma
PLATINUM PARTNER

Features

- Performance statistics
- Call divert
- Time of day routing
- Day of week routing
- Call distribution
- Announcements
- Advanced call statistics

The benefits of Business Continuity

- Ensure that calls are always answered, no matter the circumstances impacting the business
- Protect your main customer-facing numbers such as sales and support lines
- Control key individuals' contact numbers
- It's flexible and lets you make the call routing changes for the specific issue that you're experiencing
- It provides great Management Information through online reports that can track calls during "normal" and exceptional circumstances

Download the app today!

Business Continuity is available for use on
iOS (Apple), Android, BlackBerry and Windows Mobile.
